

## HOW WE MAKE IT HAPPEN

We take a creative, practical approach to reducing our environmental impact across our offices and warehouses:

- Solar power: Panels and solar tubes cut energy use.
- Smarter lighting: LED upgrades, motion sensors, and daylight-responsive lighting systems.
- Zero-to-landfill: 100% of our waste is diverted from landfill, with 90% recycled.
- Cardboard repurposing: Over 6.2 tonnes reused each year for packaging infill — saving trees and cutting costs.
- Cartridge recycling: 100% of printer cartridges recycled responsibly.
- Eco-friendly packaging: Right-sizing parcels, reducing plastics, and introducing biodegradable options.

## OUR GREEN CREDENTIALS

At Dawleys, we believe rapid growth and sustainability go hand-in-hand. In fact, we've found the two feed each other. By embedding ISO14001, the international gold standard for environmental management, into the heart of our business, we're proving that greener really is smarter.

## WHY IT MATTERS

Our ISO14001 accreditation isn't just a certificate on the wall — it's a promise to our clients, partners, and community:

- Transparent and responsible business practices
- Compliance with evolving regulations (including the UK's 2025 recycling legislation)
- Continuous improvement in everything we do
- Tangible benefits for clients: lower energy bills, smarter processes, and greener supply chains

## GROWTH, RESPONSIBLY

Sustainability isn't a side project at Dawleys — it's built into the way we grow. From fulfilment to customer care, our clients benefit from operations that are efficient, future-ready, and environmentally responsible.
